

Dr. Meenakshi Agarwal

## Beauty, confidence, radiance... with BOTOX®

While most women go to the latest Vogue or In Style to see what's hot in fashion, Dr. Meenakshi Agarwal of Face & Figure suggest to go back a few thousand years to find the latest trend in BOTOX® treatments - The Nefertiti Lift. It is a procedure to rejuvenate a sagging jaw line which is an important cosmetic area of the face. As we age, gravity pulls the skin on our faces lower, leading to saggy jowls. It is a method of injecting BOTOX® into the jaw line and neck to relax the downward pull, leading to a sharper, defined jaw line and face. BOTOX® can make your jaw line look slimmer thus gives a more feminine and softer look.

BOTOX® is the world's no. 1 non surgical cosmetic procedure done in an aesthetic clinic to enhance the beauty of an individual. BOTOX® reduces large or open pores, sweating and sebum production on

the skin of the face leading to less oily, tightened and glowing skin.

I keep on receiving enquiries for excessive sweating problem in underarms, palms, soles of the feet or face which makes it hard for individual to hold a pen, grip a car steering wheel, or shake hands. It is embarrassing as it stains clothes, ruins fabrics, limits personal style, erodes self-confidence and complicates business and social interactions. Solution for this problem is BOTOX® which reduces excessive sweating and gives feeling of freshness through out the day.

BOTOX® is used for various indications which include expression lines like forehead lines, crow's feet, frown lines, bunny lines and the results last for 4-6 months .It is also used for brow shaping/lift which gives a confident and fresh look

These procedures can be performed only by a trained practioner trained by Allergan, the makers of BOTOX®. There are various other solutions in the market being sold as BOTOX®, and patients should be aware that the efficacy and safety profile of these variants are questionable as they are not proven .
