

Dr. Rashmi Shetty

Botox - No Age Bar.

Who ever told you that Botox is only an anti-ageing tool or just a wrinkle eraser?

Did you know Botox is very effective and popular for various other conditions like...

Excessive sweating/ Hyperhidrosis

Tiny injections placing the drug just beneath the skin of underarms, palms or sole will make you perspire 80% less and results last as long as a year. For those who sweat on the face and are always concerned about make up not staying on, this is an ideal solution. Added benefits are cleaner clothes, no bad body odour, happier handshakes and a more confident you.

Open Pores

Have you tried all the magic lotions and potions? Now try diluted botox, and in one sitting you have closed pores, tighter, grease free skin. The only side effect being a glowing face.

Acne and post acne scars

BOTOX works wonders in reducing the oil on the skin. Keeping the pores closed, tighter skin makes the scar less deep. This combined with fillers and peels can achieve near smooth skin.

Brow Lift

Few tiny injections of botox along your eyebrows and you

can now have arched or flared eyebrows. A good brow lift is achievable along with fillers. The good news is that it takes just 15 mins and you could shoot or go partying right away.

Flared Nostrils

One prick on each side and you are relaxed and can have a proud nose.

Droopy sad looking corners of mouth

The culprit is your tugging depressor angular muscle. All it takes is a wee bit of Botox and some support with fillers and you'll look as happy and pleasant as you feel.

All these involve tiny injections with the finest needle after application of anesthetic cream. Very little chances, if at all, of redness, swelling and rarely bruising. These are office procedures and you can resume your activities immediately after. For those safety conscious, Botox has been used for other medical conditions in children and adults for over 25 years in much larger doses. **And yes it is a great solution for those unwanted expression lines too!**
